

# AI TUNER INSTITUTE

## EMPLOYER BRIEF

*Building Human Oversight for Artificial Intelligence*

The AI Tuner Institute prepares workers to oversee AI systems, evaluate AI outputs, apply ethical judgment, and maintain the human accountability layer that organizations require for responsible AI deployment. Founded by Rochelle Newton, EdD, a technology leader with nearly five decades of experience, the Institute brings academic rigor, workforce expertise, and a human-centered philosophy to the challenge of AI workforce disruption.

### At A Glance:

- ☐ Prepares professionals to oversee AI systems
- ☐ Strengthens AI governance and human accountability
- ☐ Bridges Digital Math and Life Math
- ☐ Supports responsible AI deployment across industries
- ☐ Lifetime learning beyond the certificate

### What We Teach

Every graduate of the AI Tuner Institute is trained in the core competencies required for safe, effective, and ethical AI deployment across industries.

**AI Fundamentals** Students learn how AI models work, how they are trained, what they optimize for, and why they fail. They gain the vocabulary and conceptual grounding needed to work confidently in AI-augmented environments.

**Bias Recognition** Students learn to identify bias in AI outputs, question data assumptions, and advocate for fairer outcomes in real organizational settings.

**Ethics in AI Deployment** Training includes privacy, fairness, transparency, accountability, and the human costs of getting AI wrong. Students understand the ethical landscape surrounding AI adoption.

**Guardrails and Governance** Students learn how responsible organizations set boundaries on AI systems, who is accountable when AI causes harm, and how Tuners serve as the human oversight layer.

**Digital Math vs. Life Math** Our proprietary framework teaches students to distinguish what AI optimizes (efficiency, speed, cost) from what humans require (dignity, context, judgment, sustainability).

**Industry Application** Students learn how AI is entering specific fields and how to apply domain expertise alongside AI fluency to add value from day one.

**Output Verification** Students learn to evaluate AI-generated content, decisions, and recommendations, and to recognize when AI produces something plausible but wrong.

**Human Oversight Skills** Students learn the practical skills of monitoring AI systems, troubleshooting failures, escalating issues, and training colleagues.

## Why It Matters

Organizations are deploying AI faster than workforces can adapt. Technical skills alone are not enough. Workers need judgment, ethics, contextual reasoning, and the ability to recognize when AI is wrong. Without trained oversight, AI systems produce errors no one catches, decisions no one questions, and outcomes no one intended.

AI Tuner Institute graduates are prepared to fill this gap.

## Partnership Options

The Institute offers multiple partnership pathways for employers and organizations:

- **AI Literacy Programs** for broad workforce readiness
- **Institutional Tuner Certification** for oversight-focused roles
- **Industry-Specific AI Fluency Programs** tailored to sector needs
- **AI Governance and Guardrails Training** for compliance and leadership teams
- **Workforce Transition Programs** for organizations navigating restructuring or displacement
